

GAURAV MAIHURIA

Senior Software Engineer | Full-Stack Developer (MERN, NestJS, AWS)

Bangalore, Karnataka | +91 8081530413 | maihuriagaurav16@gmail.com | [linkedin.com/in/gaurav-maihuria](https://www.linkedin.com/in/gaurav-maihuria) | github.com/gaurav16-lang | invarium.ai | gauravmaihuria.dorik.io

SUMMARY

Highly motivated and results-oriented Full-Stack Web Developer with expertise in MERN stack technologies, NestJS, and cloud services (AWS). Proven ability to design, develop, and optimize scalable web applications, including leading AI-assisted legacy migrations and independently building products end-to-end from architecture to production. Seeking to leverage strong technical skills and problem-solving abilities in a challenging environment to drive impactful solutions and contribute to organizational growth.

SKILLS

React.js, Node.js, NestJS, MongoDB, PostgreSQL, Prisma, Redis, BullMQ, Express.js, TypeScript, JavaScript, RESTful APIs, Microservices, AWS Services (EC2, Lambda, Auto-Scaling, ELB, S3, EBS, Cognito, IAM, CloudWatch, Route 53), Docker, Kubernetes, CI/CD, SQL, HTML/CSS, Redux, React-Router-DOM, React Testing Library, System Design (HLD + LLD), AI-agent-assisted development, Problem Solving, Leadership, Communication

WORK EXPERIENCE

Senior Software Engineer

May 2026 - Present

CrimsonLogic India Pvt. Ltd. | Bangalore

- Working on the SmartGWT-to-React migration for CrimsonLogic's trade facilitation and maritime port services platform, using AI agents to accelerate development and increase productivity.
- Successfully migrated two applications, FTZ (Free Trade Zone) and EMS, from SmartGWT to a modern React-based architecture.
- Worked across a config-driven, ERA → Core → EMS layer architecture, debugging backend and DataSource issues to ensure a clean migration.
- Used Claude Code, Cursor, and Playwright MCP for AI-assisted automation testing, streamlining QA workflows across the migration.

Freelance Full-Stack Developer

Feb 2026 - May 2026

Self-employed | Remote

- Built Invarium.ai end-to-end, from coding to production — an independent AI agent testing and evaluation platform featuring agent intelligence graphs, a scenario builder, test runner, evaluator, MCP server integration, and a results dashboard.
- Partnered with ContentLens.ai to enhance their existing application, adding new features and improving overall functionality.

Software Engineer

Mar 2022 - Feb 2026

Tricog Health India | Bangalore

- Architected and developed robust RESTful APIs to enable seamless communication between frontend and backend systems.
- Integrated critical Omron APIs to retrieve real-time health data from blood pressure monitoring devices and Apple Watch, ensuring accurate and reliable data synchronization.
- Engineered a comprehensive notification service, delivering timely push notifications, SMS, and email for doctors, care teams, and patients.
- Spearheaded the migration of the Atlas Admin Portal (TLAS) from Angular to the MERN stack, significantly enhancing dashboard performance, maintainability, and scalability.

- Led the end-to-end development of the Tricare platform from scratch, encompassing system architecture design, database schema modeling, and comprehensive feature implementation.
- Developed and deployed a log-tracer microservice, capturing and tracking audit logs to improve system observability and ensure compliance.
- Designed and implemented a dynamic report builder, generating patient reports to enhance data visibility and support clinical decision-making.
- Authored a vital-converter library to standardize and efficiently process patient vitals across the application.
- Integrated secure Agora APIs, enabling one-click video calling and recording for clients, streamlining access through the UI.
- Implemented advanced OCR functionality to extract structured data from PDFs and images, including API development, caching strategies, and UI integration.
- Integrated Exotel APIs to facilitate one-click calling and recording between patients and care teams directly within the platform.
- Architected and deployed secure authentication and authorization flows leveraging AWS Cognito, ensuring robust access control and role-based permissions for the TCC platform.
- Optimized backend APIs and system architecture, significantly reducing response latency and improving performance and scalability under increasing user load.
- Mentored and trained junior team members, enhancing overall team efficiency and code quality through structured code reviews and technical sessions.

NOTABLE ACHIEVEMENTS

- Migrated SmartGWT to React using AI agents, successfully delivering the FTZ and EMS application migrations at CrimsonLogic.
- Optimized backend APIs and system architecture, significantly reducing response latency and improving performance and scalability under increasing user load.
- Independently built and developed Invarium.ai end-to-end, from coding to production.
- Used Claude Code, Cursor, and Playwright MCP for AI-assisted automation testing at CrimsonLogic.

PROJECTS

Invarium.ai

Independent Builder • Technologies: React, NestJS, PostgreSQL, Prisma, Redis, BullMQ, AWS • invarium.ai

- An AI agent testing and evaluation platform built independently end-to-end (coding to production), including agent intelligence graphs, audit overlays, React Flow dashboards, an MCP server with VS Code/Cursor integration, and Google/GitHub OAuth built from scratch.

Keebo Health

Software Engineer • Technologies: NestJS, React.js

- An advanced connected cardiac care platform designed to transform how heart conditions are monitored and managed remotely, developed through a collaboration between OMRON Healthcare and Tricog Health.

Care-Platform

Software Engineer • Technologies: React.js

- A care platform that turns cardiac data and AI insights into continuous patient care, used by doctors and care teams to monitor patients remotely, review alerts, take timely clinical actions, and coordinate follow-up.

SaaS Admin

Software Engineer • Technologies: NestJS, React.js

- A SaaS Admin to centrally manage multiple hospitals, users, and devices, handle configs without code changes, ensure data isolation & compliance, and let ops teams run daily workflows without developer dependency, all while scaling the product safely.

EDUCATION

Full-Stack Development Certificate <i>Masai School, Bangalore</i>	Jun 2021 - Mar 2022
Bachelor of Engineering in Computer Science & Engineering <i>RGPV University, Bhopal</i>	Aug 2016 - Dec 2020
Intermediate (10+2) <i>Kendriya Vidyalaya No-3, Jhansi</i>	Jun 2014 - Jun 2015

ACCOMPLISHMENTS

- Certification: Namaste React — Namaste Dev (2025)

LANGUAGES

English, Hindi
